

## Operational Transparency

Public advance notice of pricing changes creates a level playing field for all market participants.

### Issue Source

DC Energy

### Stakeholder Group Assignment

The Market Implementation Committee should discuss a process for determining prior public notification of the potential for and implementation timeline for closed loop interfaces.

### Key Work Activities

The MIC should discuss: (i) if there should be a public notification of the potential creation of a closed loop interface; (ii) if the MIC agrees prior public notification is appropriate, what the timetable should be for such notification; (iii) if the MIC agrees prior public notification is appropriate, what the specific notification mediums (e.g., PJM e-mail, PJM meetings, etc.) should be for such notification; (iv) if the MIC agrees prior public notification is appropriate, what exceptions (e.g., one-time short-duration outages) to the agreed upon process may be appropriate; and (v) if other public prior notification of operational changes (e.g., System Protection Schemes) should conform to the agreed upon methodology.

### Expected Deliverables

The MIC should present appropriate Manual, Operating Agreement and Tariff changes necessary if agreement reached on a specific process for prior public notification of operational changes.

### Expected Overall Duration of Work

Three months

### Decision-Making Method

Tier 1, consensus (unanimity) on a single proposal (preferred default option), or Tier 2, multiple alternatives, as determined by the MIC.
