

## PJM Industrial Customer Coalition (PJM ICC) Package

Identical to the Joint Stakeholder proposal except for the changes below:

- ▶ Penalty based on IMM's proposal, full penalty (impact factor of 1) if:
  - ▶ Unit clears DA or runs RT on cost-based offers AND is either
    - ▶ Paid DA/Balancing operating reserves or
    - ▶ Cost offer is above \$1,000/MWh or
    - ▶ **A unit is marginal in DA or RT on its cost based offer**
  - ▶ Or, unit fails TPS test for constraints **and was not committed**
  - ▶ Or, cost offer is above \$1,000/MWh
- ▶ 10% of full penalty if the above don't apply - to reflect lack of impact
- ▶ Additional Concept included in this package:<sup>1</sup> A unit committed on its price based schedule that later fails the TPS test during its minimum run time or hours of its DA commitment would not have an impact factor = 1 ( unless other criteria stated above are met)

---

<sup>1</sup>This concept was included in the proposed changes and is part of the package. Given the time constraints associated with amending the new package during the MIC discussion, the concept, rather than precise language was captured. More detailed language for this concept will be included in the manual and/or tariff language that will be developed to support this package.
