# What is HHI?

- **The Herfindahl-Hirschman Index (HHI) concentration ratio is the sum of the squares of the market shares of all firms in a market.**
- **The HHI is calculated by squaring the market share of each firm competing in the market and then summing the resulting numbers.**
  - **For example, for a market consisting of four firms with shares of 35, 30, 20, and 15 percent, the HHI is 2750**  
 **$= (35^2 + 30^2 + 20^2 + 15^2)$**   
 **$= 2750$**

# Interpretation of HHI Results

- **FERC's Merger Policy Statement defines levels of concentration by HHI level.**
  - **The market is unconcentrated if the market HHI is below 1000, the HHI if there were 10 firms with equal market shares.**
  - **The market is moderately concentrated if the market HHI is from 1000 to 1800.**
  - **The market is highly concentrated if the market HHI is greater than 1800, the HHI if there were between five and six firms with equal market shares.**
