

NextGen Update Company Profile Overview

Josh Stephenson
Interconnection Projects

- PJM is developing a new tool, NextGen, to replace Queue Point for processing New Service Requests
- Lifecycle management tool from application submission through to commercial operation
- Objective: Support the new interconnection process with greater transparency amongst stakeholders

- The deployment of NextGen will occur in phases
 - First deployment will be in Q1 of 2025
- Users will need to establish a Company Profile
- Cycle 1 Application Phase remains open in Queue Point
 - Generation and Transmission Interconnection Requests as well as eligible Long Term Firm projects that follow the Cycle Process will need to be reentered in NextGen

The user's company is determined through Account Manager – 'TerraWatt' in this example.

Company information and Affiliated Applicant information will be shared with all employees of 'TerraWatt' with NextGen access.
