[Project 2023-07](#) Transmission System Planning Performance Requirements for Extreme Weather

PROJECT BACKGROUND:

Background

FERC directed NERC (Order No. 896) to develop modifications to Reliability Standard TPL-001-5.1 or a new Reliability Standard, to require the following:

- (1) development of benchmark planning cases based on major prior extreme heat and cold weather events and/or meteorological projections;
- (2) planning for extreme heat and cold weather events using steady state and transient stability analyses expanded to cover a range of extreme weather scenarios including the expected resource mix's availability during extreme heat and cold weather conditions, and including the wide-area impacts of extreme heat and cold weather; and
- (3) development of corrective action plans that mitigate any instances where performance requirements for extreme heat and cold weather events are not met.

NERC issued a Level 2 Alert relating to 6 GHZ Communication Penetration in the Electric Industry

Applicable to: DP, DP-UFLS, GO, and TO

The alert includes a series of questions, that are intended to determine an initial extent of condition in assessing the depth of reliance on 6 GHz communications technology and the potential severity of interference
