

Changes found in the February 2021 DR Hub XSD release are shown below.

Note: All users should (at a minimum) be at the December 2020 release level by February 1, 2021. Items included in this release will not be available to implementations using a prior release.

Prior to updating or replacing any XSD, backup existing versions of the current XSD and any in-house changes you've made prior to this release.

It is advisable to perform a file comparison between the XSD you are using today and the XSD you are migrating to.

Please verify all changes prior to implementation.

The February 2021 XSD changes are as follows:

```
<! -- Added: The below element has been added in support of MOPR related changes -->
```

```
<!--Items added to <xs:complexType name="registrationCapacityType"> element -->
```

```
<xs:element name="exceedHistoricExempt" type="tns:yesNoEnum" minOccurs="0"/>
```

End of Change List
